The climate crisis is a problem that the world is currently confronting. Even while the scientific community agrees that human activity is causing global warming, there are a ton of articles on the internet that propagate false information about the climate. The climate change counter movement has meticulously crafted these articles.

(CCCM) groups in order to shape the discourse surrounding climate change. We review the research on

misinformation about climate change in the social sciences and repackage it for the NLP community.

Despite extensive efforts to identify bogus news, no dataset of disinformation is currently available.

It is unique to the climate change domain. In an effort to close this gap, we scrape and release

publications that include known false facts about climate change
